--Abstract

10 The method is for downloading data to mobile devices belonging to a mobile telecommunications network. When downloading of update information to one or more mobile devices is initiated in some way, a message with update information to be sent to the mobile devices is formed on the basis of the stored information. The formed information message is then downloaded to the mobile devices. The network is for downloading data to mobile devices that have mobile devices and a mobile
15 telecommunications network to which the mobile devices belong.

The network also has a repository containing information of terminal capabilities and/or subscriber information of the mobile devices in the network.
